

# Itoki Environmental Policy

Our environmental policies have been decided as below,  
based on our corporate concept.

Itoki Group recognizes that solutions to environmental problems are the most important challenges for the sustainable beautiful Earth and to pass on to the future a nature rich society where people can live a vivid life.

We will contribute in all areas of our business activities the realization of a sustainable society by effectively utilizing the limited resources, conserving the biodiversity and reducing the burden on the global environment

## Principals

1. To provide products, services and space designs that are friendly to the environment and to people.  
When developing products, we will promote the conversion of products into "Eco Products" through manufacturing that is universal and eco-friendly.
2. To incorporate environmental activities into everyday business, striving for environment conservation, and pollution prevention.
  - ① Facilitation of minimum resources, minimum energy, and recycling.
  - ② Thorough management and usage quantity minimization of hazardous substances.
  - ③ Minimize release volume by managing global warming gas (CO<sub>2</sub>) and environmental pollutants.
  - ④ Promotion of green procurement and purchasing.
  - ⑤ Research and development into environmental impact reduction technology.
  - ⑥ Conservation of biodiversity
3. To strictly observe laws and regulations concerning the environment, as well as any other regulations or agreements we have consented to. Furthermore, to establish our own environmental standards, and to strictly observe these standards.
4. To disseminate knowledge of environmental principals to all personnel, and increase environmental awareness through planned education and training, fostering human resources in such a way that this will be reflected in work.
5. To continuously improve environmental management systems.
